

Onsite Paging

Major Amusement Park's Restaurants Employ HME Wireless' GuestCall IQ™ Paging Systems to Enhance Service and Efficiency

ATLANTA, GA, APRIL 12, 2010 – Nearly all of the full-service restaurants accepting reservations at a major amusement park in Orlando, FL, now use GuestCall IQ™ [restaurant pager system](#) from HME Wireless for table management. Food & Beverage Manager of the major amusement park says, "That's approximately 25 to 30 paging systems, and 1,300 pagers in all."

At the major amusement park's bustling restaurants, crowds are a given. GuestCall IQ pagers help operators reduce traffic around host stations, turn tables faster, and offer more efficient, seamless service to customers.

[GuestCall IQ's restaurant paging system's](#) exclusive, patent-pending, automatic renumbering system has also changed the way pagers are programmed, stocked and reordered. Pagers are simply placed in the interchangeable charger slots, and a button is pushed. No more tracking numbers to see which ones are missing, or ending up with duplicates when reordering — saving time and money. This huge leap in technology allows operators to "commissary" pagers — any pager can be sent to any location, and with a simple press of a button, "ID'd" to that restaurant. The key with GuestCall IQ is that it strips out unit level management of the paging systems, allowing operators to focus on other areas of the operation.

Technology Integration Manager at the major amusement park reports, "Quicker turnaround on defective pagers is very helpful to us. We don't have to try to predict which pager number replacements to stock, or keep a larger stock on hand."
